SUMMARY

Full Stack Developer with a B. Tech in Mechanical Engineering, having transitioned to software through intensive self-learning and building 3 production-deployed applications. Skilled in React.js, Next.js, Node.js, and PostgreSQL. Proven ability to design scalable REST APIs, real-time systems, and AI-integrated tools. Seeking an entry-level Software Developer role in a product-based or startup environment.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, C++

Frontend: React.js, Next.js, Redux, Tailwind CSS, Responsive Web Design

Backend: Node.js, Express.js, REST API Design, WebSocket (Socket.io), JWT Authentication

Databases: MongoDB, PostgreSQL, SQL, Database Schema Design, Query Optimization

Cloud & DevOps: Vercel, Render, Git, GitHub, CI/CD, Docker, Agile/Scrum

Problem Solving: Data Structures, Algorithms, System Design, OOP, API Integration

EXPERIENCE

Full Stack Developer Intern | [Unified Mentor Remote](#) | Dec 2024 – Feb 2025

- Built an AI-powered interview platform using Next.js, Node.js, and PostgreSQL, enabling automated interview session management and real-time analytics for 50+ end users.
- Designed and developed 10+ REST APIs for user management, interview session handling, and data analytics, following RESTful best practices and proper HTTP status codes — reducing backend errors by ~30%.
- Optimized PostgreSQL queries and Next.js server-side rendering, improving page load time by 35% and reducing average API response time from ~800ms to ~300ms.

PROJECTS

Formzen — Form Builder SaaS [GitHub](#) | [Live](#) | Next.js, Node.js, Express, Supabase, Zustand, Tailwind

- Built a scalable SaaS form builder with drag-and-drop creation, custom validations, and real-time response collection — supporting 100+ concurrent form submissions.
- Integrated Supabase for authentication and database, and implemented SSR/SSG performance optimizations, reducing initial load by 40%.
- Developed an analytics dashboard providing form creators with live response insights and submission trends.

Chatter — Real-Time Chat App [GitHub](#) | [Live](#) | React, Node.js, Express, MongoDB, Socket.io, JWT

- Architected a full-stack real-time chat application supporting 10+ concurrent users using WebSocket (Socket.io) for bi-directional communication with sub-100ms latency.
- Implemented JWT authentication with protected routes and secure session management, achieving zero unauthorized access incidents in production.
- Designed a MongoDB schema optimized for efficient conversation history retrieval, reducing query time by 25%.

YThumbnail — AI Thumbnail Generator [GitHub](#) | [Live](#) | ReactJS, NodeJS, ExpressJS, JWT, MongoDB

- Integrated Google Gemini API to generate AI-powered thumbnails from text prompts, processing 100+ images in the first month of deployment.
- Built a secure REST API with rate limiting and input validation for the image generation pipeline, preventing abuse and ensuring >99% uptime.
- Implemented user auth and generation history with JWT, supporting persistent accounts across sessions.

EDUCATION

Indian Institute of Engineering Science and Technology, Shibpur — Kolkata, West Bengal

B. Tech in Mechanical Engineering | CGPA: 7.14 | 2020–2024

Transitioned to software development through self-directed learning, building production-grade full-stack applications while completing degree.
